Claims

MAR 0 5 2009

- 1. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface said process comprising:
- (a) applying a layer of a hydrophilic solid material comprising at least 30% by dry weight of an animal glue based on the total weight of the hydrophilic solid material to a polymeric label and thereafter drying said layer of hydrophilic material to form a water activatable hydrophilic layer that can be activated into a tacky fastenable adhesive:
- b) applying a sufficient amount of water, water containing a cross-linking agent, a water based adhesive or a water based adhesive containing a cross-linking agent to said activatable hydrophilic layer to form a tacky fastenable polymeric label;
- (c) fastening said tacky fastenable polymeric label to a glass, plastic or metal container or surface; and(d) curing said polymeric label on said glass, plastic or metal surface or container.
- 2. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein the hydrophilic solid material is 90 percent by weight animal glue.
- 3. (original):A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein the polymer for the polymeric label is selected from the group consisting of polypropylene, polyethylene, polystyrene, polyester, polycarbonate, vinyl, cellophane and compatibilized polymer blends.
- 4. (original): A process for applying a polymeric label to a

glass, plastic or metal container or surface as defined in claim 1 wherein step (b) is carried out with the application of a sufficient amount of water to said activatable layer to form a tacky fastenable polymeric label.

- 5. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein step (b) is carried out with the application of a sufficient amount of water containing an effective amount of a crosslinking agent to said activatable layer to form a tacky fastenable polymeric label.
- 6. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein step (b) is carried out with the application of a sufficient amount of water containing an effective amount of a crosslinking agent to said activatable layer to form a tacky fastenable polymeric label.
- 7. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein step (b) is carried out with the application of a sufficient amount of water based activator to said activatable layer to form a tacky fastenable polymeric label.
- 8. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 wherein step (b) is carried out with the application of a sufficient amount of water based activator containing a effective amount of a cross-linking agent to said activatable layer to form a tacky fastenable polymeric label.
- 9. (original): A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in

claim 1 wherein the total amount of dried hydrophilic material is from 0.02 g to 0.7 g of dried hydrophilic material per sq. cm. of polymer label material.

- 10. (original):A process for applying a polymeric label to a glass, plastic or metal container or surface as defined in claim 1 where a slip agent is added to said hydrophilic material.
- 11. (original):A process for making a polymeric label stock for application to a glass, plastic or metal container or surface said process comprising: (a) applying a layer of an hydrophilic solid material comprising at least 30% by dry weight of an animal glue based on the total weight of the hydrophilic solid material by applying a aqueous dispersion comprising animal glue to a polymeric label stock and thereafter drying said layer of hydrophilic material.
- 12. (original): A process for making a polymeric label stock for application to a glass, plastic or metal container or surface as defined in claim 11 wherein said aqueous dispersion of animal glue contains a cross-linking agent.
- 13. (original): A process for making a polymeric label stock for application to a glass, plastic or metal container or surface as defined in claim 12 wherein said aqueous dispersion of animal glue contains a cross-linking agent and an slip agent.
- 14. (original): A glass, plastic or metal container which is labeled with a label which is fastened to said container with a cross-linked animal glue.
- 15. (original): A glass, plastic or metal container which is labeled with a label which is fastened to said container with a cross-linked animal glue that is applied by rewetting
